

**ABSTRACT OF THE DISCLOSURE**

- A tamper evident electronic module comprises an electronic component, a tamper evident sheet, and encapsulant material. Said component is  
5   encapsulated in said encapsulant material and said sheet overlies said component, and said sheet comprises a flexible multi-layer sheet, a plurality of said layers of said sheet being selected from the group below:-
- 10                     (i)    an electromagnetic radiation shield layer;  
                       (ii)    a tell-tale electrically conductive trip wire defining a convoluted meandering pathway on said layer, said trip wire meandering in a pattern which substantially covers said electronic component in a space filled area if said layer;  
15                     (iii)   a layer having the features of (ii), and in which the pathway comprises a fractal pattern;  
                       (iv)    a layer having the features of (ii), and in which a second tell-tale trip wire extends alongside a first tell-tale trip wire so that they meander as a spaced pair.  
20                     (v)    an active electromagnetic marking layer adapted to emit electromagnetic radiation.
